DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 2-5, 7-26, 28-31 and 33-61 are rejected under 35 U.S.C. 102(e) as being anticipated by Linehan US Patent No. 6,327,578).

As per claims 2-5, 7-26, 28-31 and 33-61, Linehan discloses a system and method for facilitating payment transactions between a customer and a merchant. The system comprises one or more processors, a customer's computer, a bank and a merchant computer. The system and method comprise:

receiving a request from the customer to pay the merchant; obtaining confidential payment information associated with the customer; generating payment authentication information based on the confidential payment information; transmitting the payment authentication information to the merchant; receiving from the merchant the payment authentication information with a merchant signature; verifying the merchant signature and the payment authentication information; and paying the merchant on behalf of the customer.

Art Unit: 3692

Linehan further teach facilitating payment to the merchant without disclosing the confidential payment information of the customer to the merchant by transmitting instructions to pay the merchant on behalf of the customer and the payment authentication information to a payment component;

Applicant is directed to column 4, lines 9-57 of Linehan. Particularly, Linehan states:

"sending from a consumer's computer a start message over an internet network to a merchant's computer. The merchant's computer then replies to the consumer's computer with a merchant message including a wallet initiation message, a merchant digital signature, and a digital certificate from an acquiring bank. The wallet initiation message includes a payment amount, an order description, a timestamp, and a nonce. This starts a consumer's wallet program in the consumer's computer in response to the wallet initiation message. The consumer's computer then sends over the internet network some consumer identity and authentication information, such as a userid and user password, plus the merchant message, to an issuer gateway operating on behalf of an issuing bank.

The issuer gateway verifies the merchants signature to prove that the consumer is dealing with the actual merchant and validates the merchant's certificate and the acquirer's certificate to prove that the merchant and issuer share a common financial arrangement. The issuer gateway then verifies that the consumer's account is active and has sufficient funds and/or credit to support the payment amount. The issuer gateway then pre-authorizes payment by sending over the internet network an authorization token, an issuer's digital certificate, the wallet initiation message, and a reference value representing the consumer's credit or debit card number. The authorization token includes the payment amount, order description, timestamp, a random nonce plus a merchant identifier and the reference to the consumer's credit or debit card number. The issuer gateway signs the authorization token. This information can be sent either to the consumer or to the merchant to fulfill the order description. If sent to the consumer, the consumer forwards the authorization token to the merchant. The merchant verifies the issuer's signature, issuer's digital certificate, and authorization token contents to validate that the payment is authorized by the issuer. "
